

CASE STUDY. FORMER ARDAGH WORKS – 2016 PHASE 1 – 2018 PHASE 2

PROJECT: Multi-works to include building demolition, asbestos removal and extraction of recoverables.

LOCATION: Former Ardagh Works, Merthyr Tydfil, Wales

CLIENT: Huntley Wood Investments Ltd

CONTRACT DURATION: 5 months – Phase 1

Euro Demolition & Dismantling was contracted to carry out multiple works to the former Ardagh factory, Merthyr Tydfil, South Wales. The site was situated on a main through road used by local residents as a route into town and local schools.

Works included removal of asbestos, concrete asbestos sheeting, soft stripping of amenities and controlled deconstruction of a 334,741 square foot factory building and an additional office block. The buildings were demolished in the traditional method using high reach demolition excavator, complete with steel a cutting shear. Once at ground level, all recoverable metals were graded and sized and subsequently delivered to the local steel mills to be utilised in their day to day processes.

Waste streams were sorted, graded and supplied to our accredited recycling partners. The works were strategically carried out with due regard to the vicinity of neighboring houses and local businesses.

Phase two of these works will take place late 2016 / early 2017. These works include the demolition of the main amenity/office block and bridge spanning river and railway line, total site remediation package, processing and stocking of all demolition arisings, concrete slabs and foundations for later use in the overall re-development scheme.

The client says... 'A very competent company! The management team were most professional and informative at each stage. We will no doubt be using their services again'
